Fayette County Department of Building Safety and Sages Networks Partner to Bring Paperless Permitting to Fayette County

Fayette County Department of Building Safety and Sages Networks Inc. located in Atlanta, Georgia, recently completed their migration and implementation to the SagesGov – Cloud based software. This software allows Fayette County residents and contractors an automated, paperless and efficient method for Plan Review, Permitting & Inspections. This also includes payment processing, project updates, project tracking and other functions throughout the construction project. This new system is already exceeding our expectations and we are looking forward to our continued partnership with Sages Networks according to Joe Scarborough, Director of Building Safety.

All Permitting and Plan Review activities prior to SagesGov were primarily manual and time consuming. SagesGov allows Fayette County departments to process permits and plans simultaneously. Frequent automated status updates and notifications keep our customers informed throughout the entire process. The system also provides more automated functionality and efficiency for our inspectors and front office staff. “We are very excited about our partnership with Sages Networks and implementation of SagesGov software for future system functionality at the County is underway. This entire venture has allowed our staff more time to concentrate on taking care of our customers”, adds Steve Tafoya, Assistant Director Building Safety.
